14 July 2004

EOS Direct Broadcast Reception and Processing at SSEC

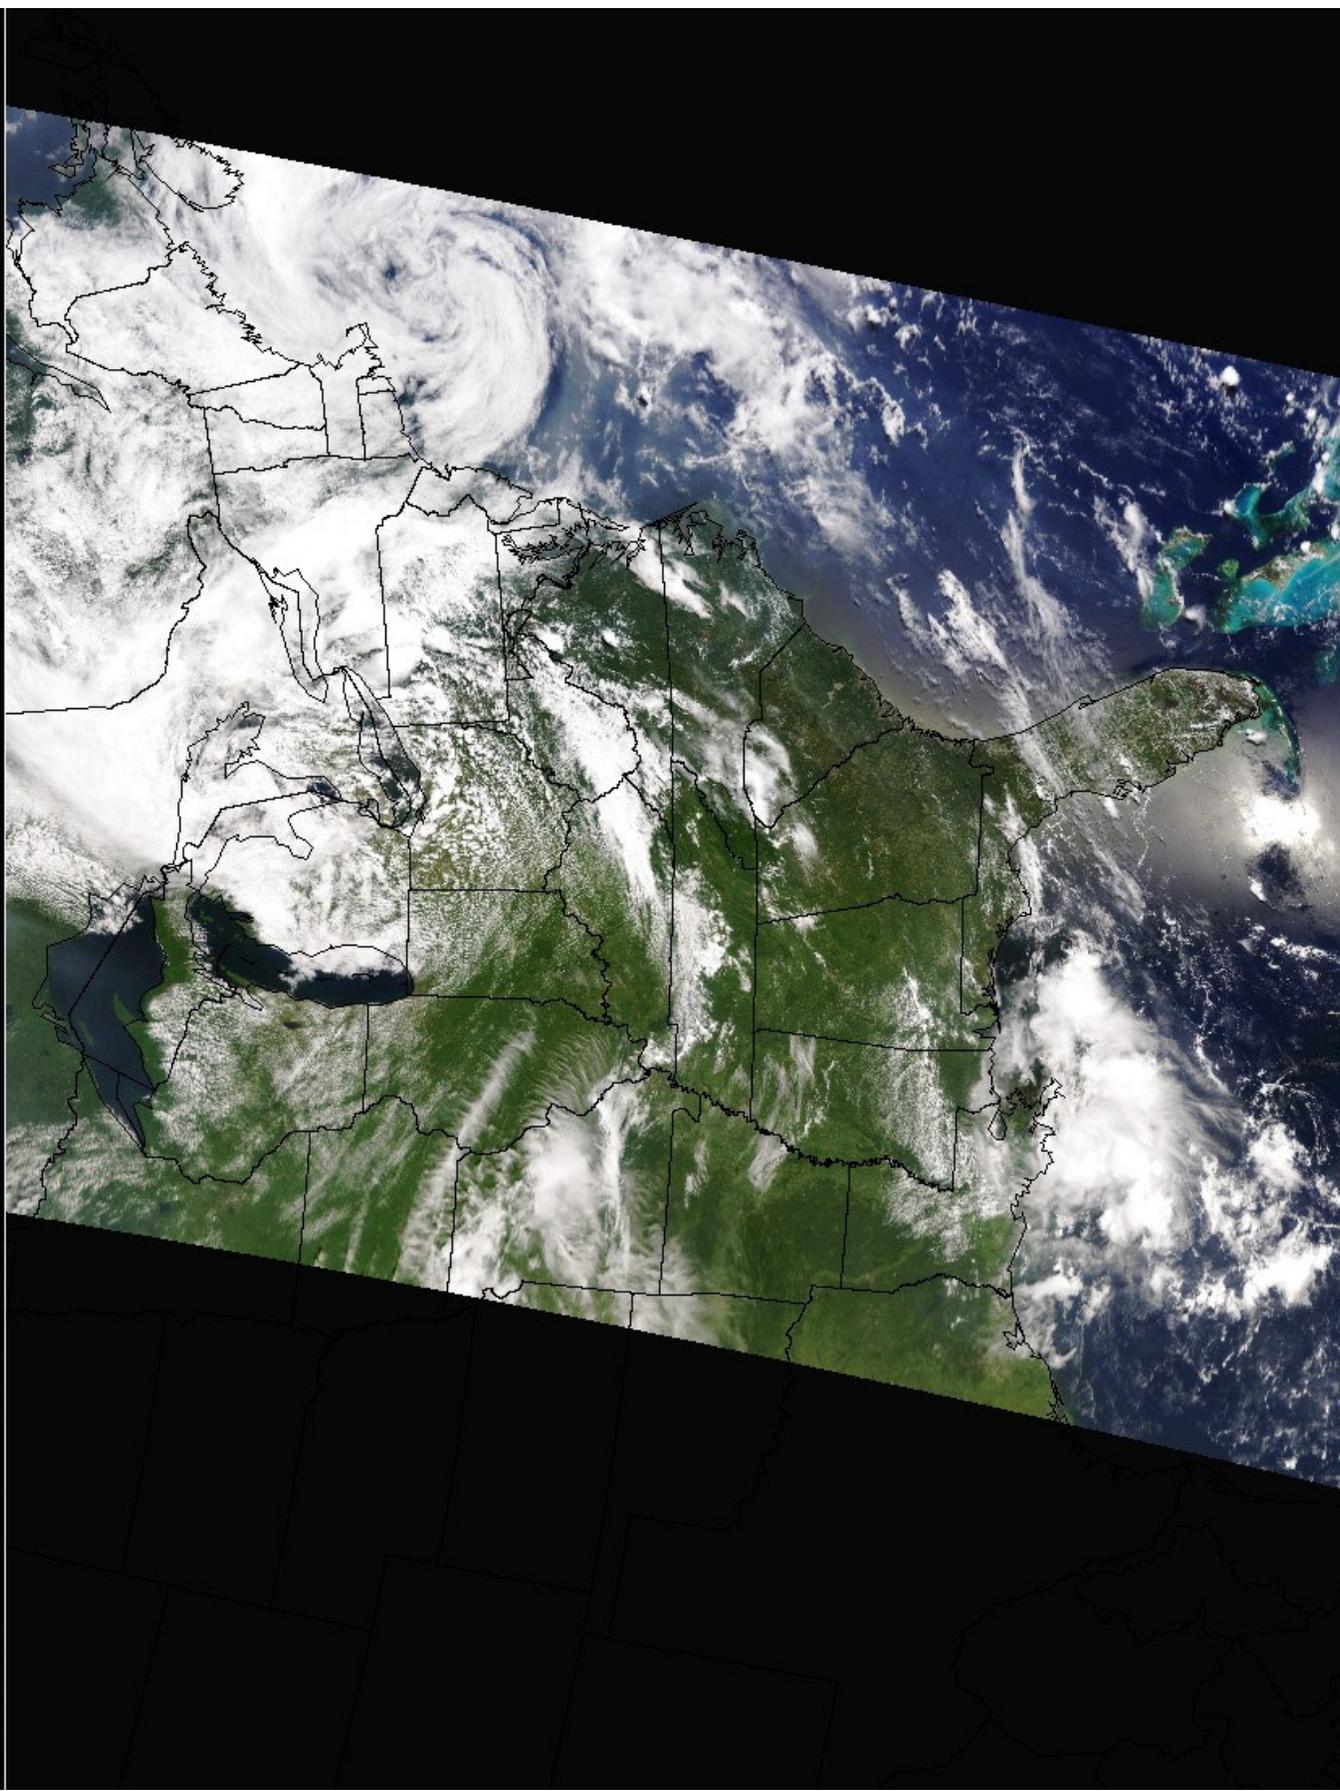

Objectives: Routine acquisition and processing of EOS direct broadcast data. Distribution of software for data processing.

Accomplishments:

- Ground station operational January 2001. Have acquired more than 5300 Terra and 1650 Aqua passes.
- MODIS and AIRS/AMSU Level 1B data and browse images, and Level 2 products, are produced automatically and made available via anonymous FTP, DODS and Web.
- IMAPP software for processing EOS direct broadcast data now in use in USA, UK, Germany, Russia, Japan, China, S. Korea, Singapore, Australia (to name a few).

Terra MODIS, 10 October 2003

International MODIS/AIRS Processing Package

Goal: Transform direct broadcast Level-0 data to calibrated & geolocated radiances (Level-1B) and science data products (Level-2).

Features:

- Ported to a range of platforms (IRIX, SunOS, AIX, HPUX, Linux),
- The only required tool kit is NCSA HDF4,
- Processing environment is greatly simplified,
- Passes of arbitrary size may be processed,
- Available at no cost; licensed under GNU GPL
- Funded by NASA (250K/yr 01-03, 350K/yr 03-06)

Available from:

<http://cimss.ssec.wisc.edu/~gumley/IMAPP/>

IMAPP Status

MODIS Level 1B products

- calibration, geolocation (L1B)

MODIS Level 2 products

- cloud mask *1 km/250 m – 48 bits of information*
- cloud top properties (height, temperature, emissivity, phase) *5x5 km retrievals over clouds*
- atmospheric profiles (T, q, total precipitable water vapor, stability indices, total ozone, skin temperature)
5x5 km retrievals clear sky only
- sea surface temperatures *1x1 km all scenes*

MODIS utilities

- destriping band 26 (correct for band 5 spectral leak)
- creating true color images tutorial

AIRS products

- AIRS/AMSU Level 1 (with JPL)

CIMSS Near-Real Time IMAPP automated processing

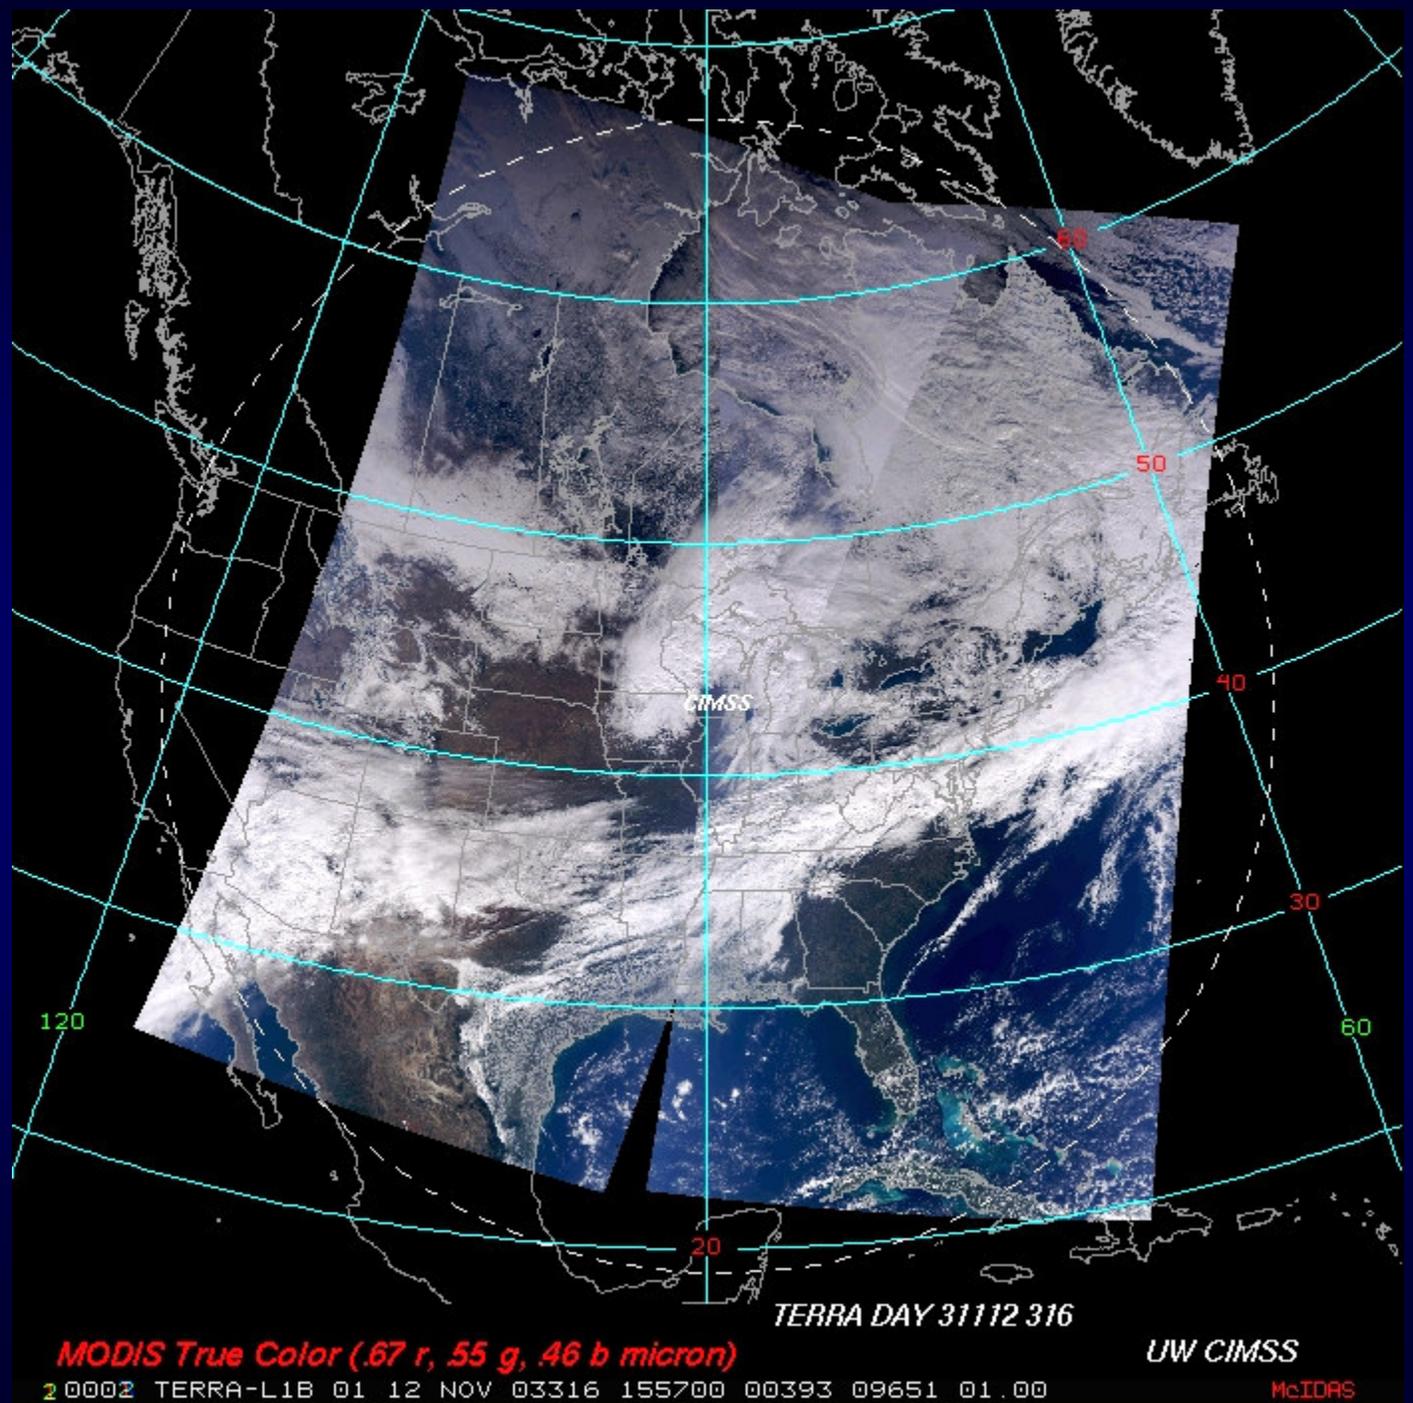

Applications:

- MODIS L1B and science product validation
- Testing of MODIS operational product changes
- Quick look images for identifying regions of spectral or meteorological interest
- Support for field experiments
- Testbed for new IMAPP products (ie., Surface Reflectance)
- Channel simulation for future instruments (Advanced Baseline Imager - 2012)

IMAPP Product Applications

- Providing US National Weather Service forecasters with near real-time high spatial resolution imagery and products (NASA SPORT).
- Providing MODIS Aerosol and Cloud data for Infusing Satellite Data into Environmental Applications (IDEA) project to aid in Air Quality Forecasts by the US EPA.
- Water quality monitoring - University of Wisconsin
- Aiding the Canadian Ice Service in monitoring the amount of ice on Hudson Bay for shipping concerns.
- Supplying cloud information from IMAPP as part of the European CLOUDMAP 2 project.

Latest Forecast Discussion - May 27, 2004

MODIS AOD over continental US shows relatively low aerosol loading with moderate AOD plume exiting the mid-Atlantic Coast. Region of moderate PM_{2.5} AQI in Midwestern AIRNow data is obscured by clouds.

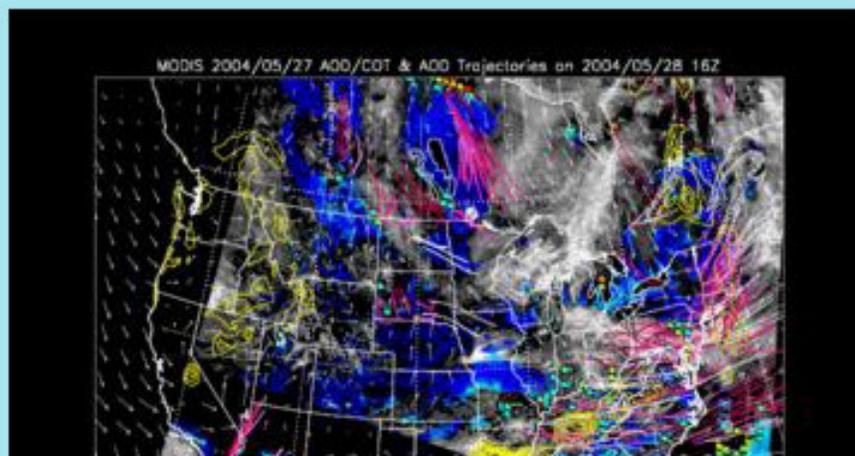

Moderate (~0.4) MODIS AOD in south-central US forecasted to be advected towards Virginia and Carolinias on 05/28 with rapid advection off the South-eastern coast by 05/29. Possibility of recirculation of aerosol loading off the coast associated with high pressure system over Florida.

Future IMAPP applications

AIRS Atmospheric Profile Retrieval:

- L2 products – *First release by end of July 2004*
 - T/q retrievals, Total Precipitable Water Vapor
 - Skin Temperature
 - Ozone Profiles, Total Column Ozone
 - Surface Emissivity, Surface Reflectivity
- AMSU Precipitation
- Combined MODIS/AIRS products

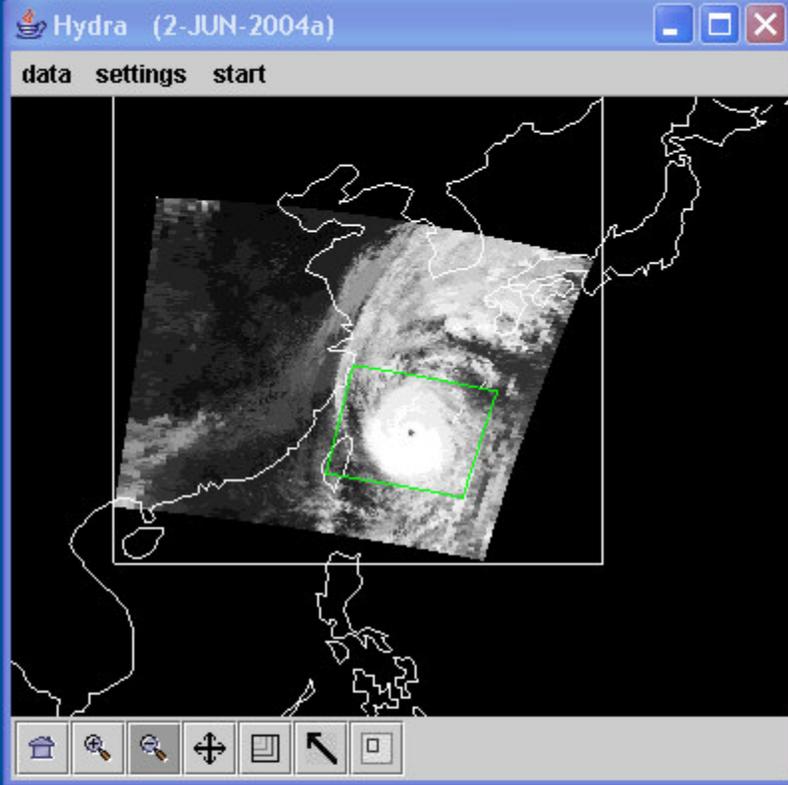

MODIS Level 2 products:

- Aerosol Optical Depth – *release by end of July 2004*
- Land Surface Reflectance
- Suspended Sediment Concentration
- Cloud Optical Properties
- Scene Classification
- Snow Cover/Lake Ice

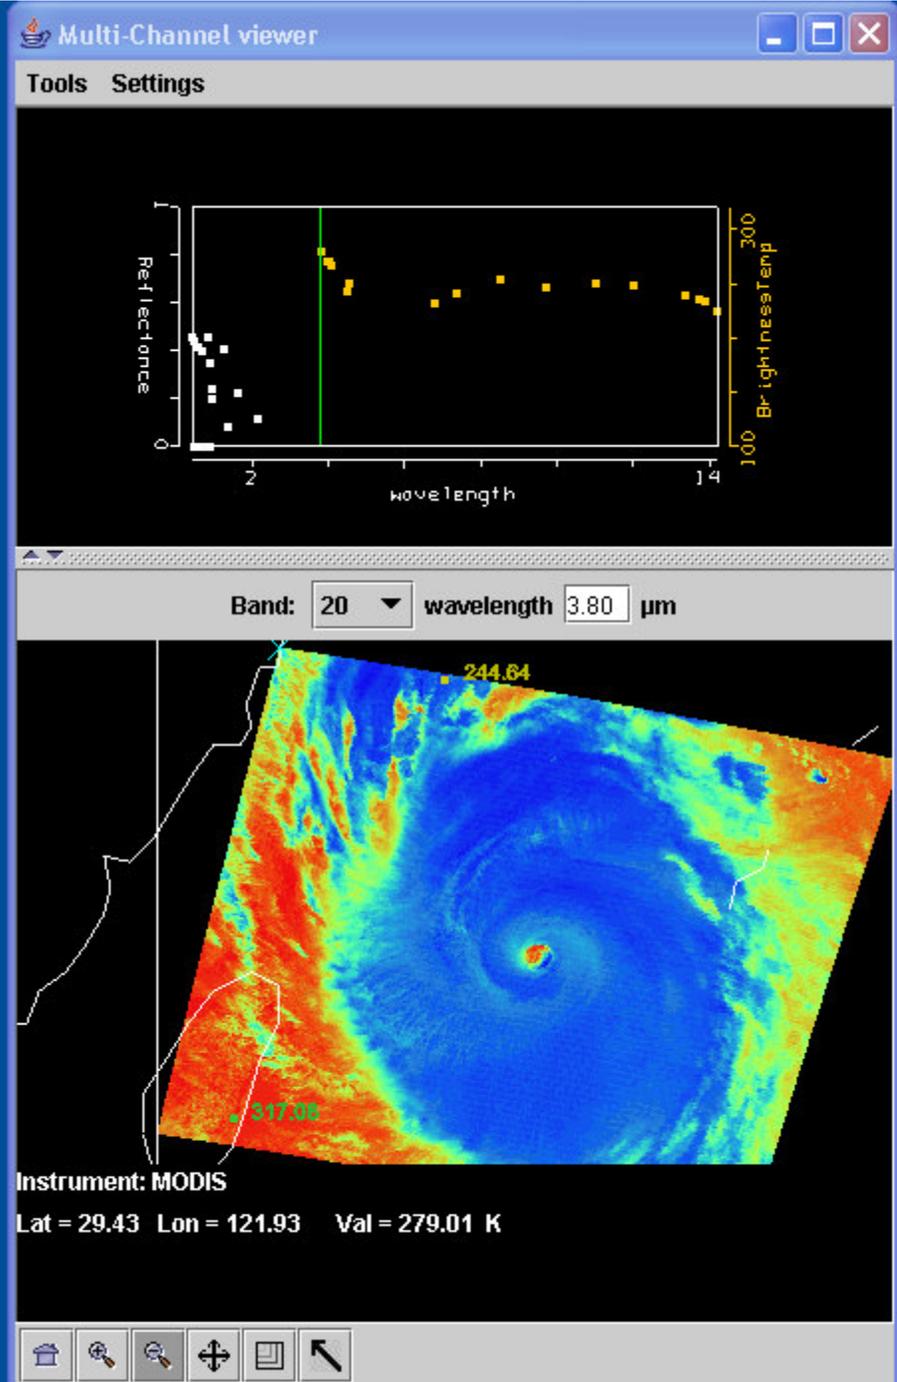

Future IMAPP applications (Continued)

Utilities:

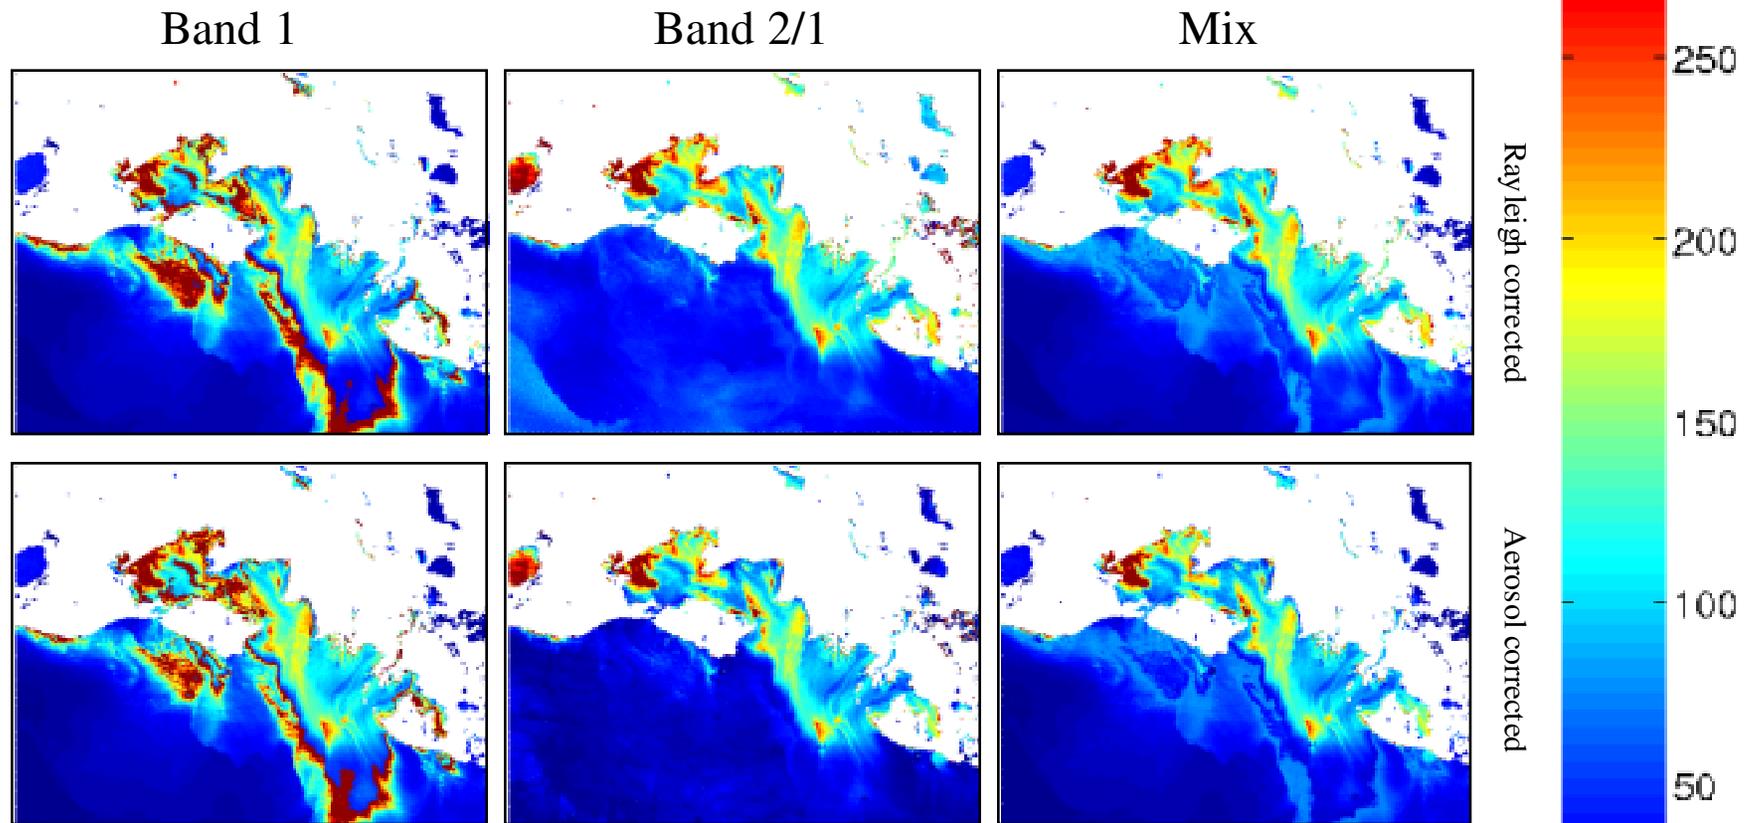

- Java application for visualizing L1B and L2 products (*Hydra*)
- Data servers to share data across the network
 - DODS server
 - ADDE server
- Utilities to collocate MODIS/AIRS pixels
- Destriping algorithm
- Corrected reflectance tutorial

Hydra Visualization Tool

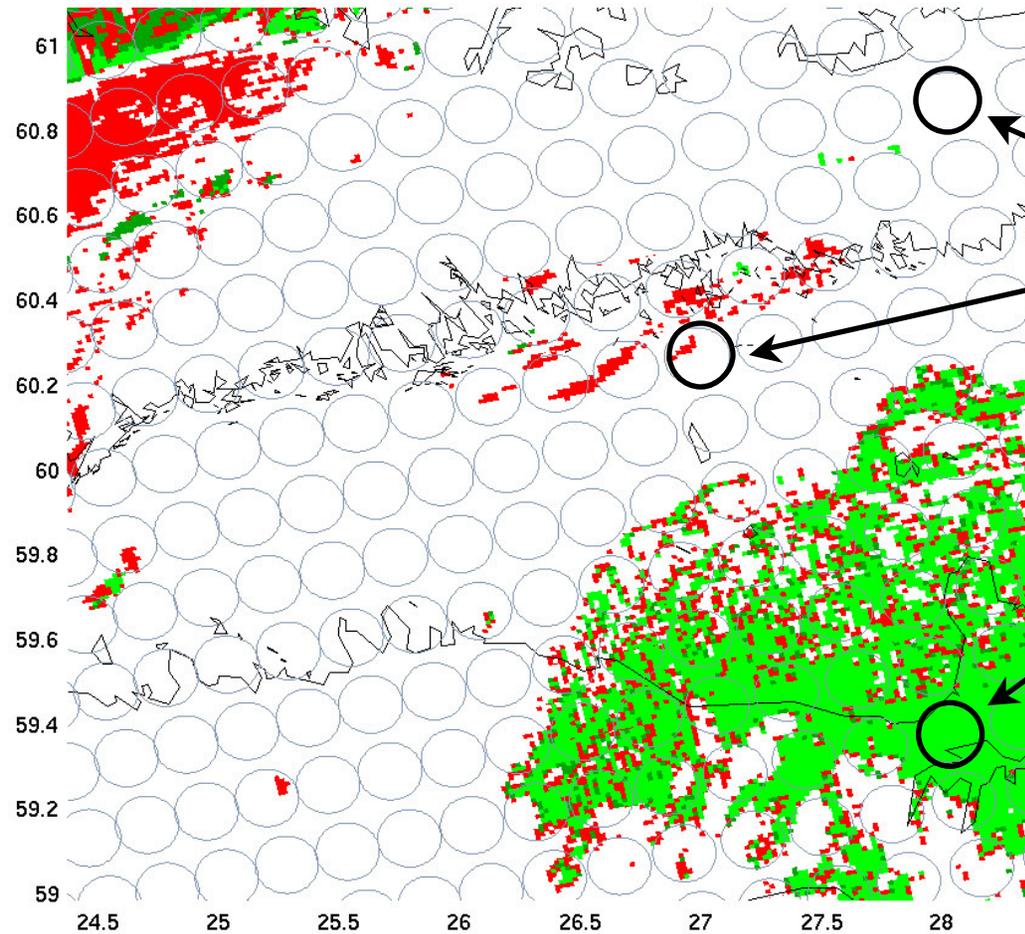

Suspended Sediment Concentration

Suspended sediment concentration from $R_{rs}(1)$, from $R_{rs}(2)/R_{rs}(1)$ and from a weighted mix of these. The upper panels give the retrieved SSC for a Rayleigh only atmospheric correction, the lower panels are for an Aerosol + Rayleigh correction. The Band 2/1 ratio method is less sensitive to the atmospheric correction and is applied where high sediment concentrations cause the band 1 method to lose precision. The weighted mix is one approach to fix this.
